

Business Request Summary — 14040336 v1.4.3

Scope: Pubapp Site Admin separation fix.

Problem: the venue-admin sidebar still shows a Site Admin entry and routes the user to /siteadmin/venues, which makes the Site Admin feel empty and incorrectly coupled to venue administration.

Required result: Site Admin must remain a fully separate platform-level admin surface. The venue-admin sidebar must stop presenting it as part of venue operations.

Fix strategy: remove the direct sidebar nav item, keep only an explicitly separated superadmin CTA to /siteadmin, and make the venue registry page clearly part of the Site Admin shell with a way back to the Common Admin dashboard.

Non-goal: do not alter unrelated venue-admin, customer, or auth flows.
